DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1, 2, and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Brain et al. WO 00/61213.

3. Brain teaches a laryngeal mask assembly comprising: a tube; a mount at a patient end of the tube; and an annular sealing cuff extending around a patient end of the mount; wherein the tube and the mount are molded together from a plastics material as an integral, single-piece component (pg. 21, lines 4-9), wherein a groove extends along an outside of the assembly opening along its length on an external surface, wherein an inflation line extends in the groove (see figure 12), wherein the sealing cuff is attached with the mount as a separate component (pg. 23, lines 32-29), wherein the sealing cuff is attached with mount by an adhesive (pg. 23, lines 23-29); and wherein the tube and mount are injection molded (pg. 22, lines 20-22).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 3761

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brain et al. in view of Sato 5392774.
6. Brain teach a laryngeal mask assembly according to claim 1. It should be noted that Brain fails to specifically teach wherein the tube and mount are molded of polyurethane. However, Sato does teach the use of polyurethane. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to use polyurethane to allow the easy insertion and allow the tube to conform with the shape of the oral cavity (col. 4, lines 14-24).
